## IN THE CLAIMS

Claim 1-16. (canceled)

Claim 17. (original)

A device for cleaning a person's hair, comprising:

an outer cap having a water impervious outer surface and sized to fit over the hair of a person;

a liner positioned inside said outer cap, said liner having a fibrous texture and being sized to contact the hair of the person;

a quantity of hair cleaning compound in said liner; and

a heat source, said heat source comprising a frangible container containing a quantity of supercooled liquid capable of releasing a predetermined amount of heat upon crystallization and a quantity of the crystal form of said liquid separated from said supercooled liquid selected from the group consisting of sodium carbonate and sodium acetate and present in an amount sufficient to initiate crystallization of said quantity of supercooled liquid upon flexing said frangible container to cause said crystal to contact at least a portion of said supercooled liquid; and

a temperature sensitive portion on said cap to indicate the temperature of the cap after breaking said frangible container;

wherein said crystallization causes said causes the temperature of the solidifying liquid to read a controlled

temperature of up to 130 °F and said hair cleaning compound is in contact with the user's hair.

## Claim 18. (currently amended)

The device method of claim 17, wherein said liner is formed from materials selected from the group consisting of natural fibers, synthetic fibers, synthetic materials and combinations thereof.

## Claim 19. (currently amended)

The device method of claim 17, wherein said hair cleaning compound is selected from the group consisting of shampoo, hair conditioner, hair moisturizer, scalp conditioning agents and mixtures thereof.

## Claim 20. (original)

The method of claim 17, wherein said frangible container being placed proximate the middle of said plurality of liner to provide heat to said liner and cap.
